

I²SL Presents:

Two Part Training Series: Laboratory Ventilation for Professionals and Fume Hood Testing Certification **February 28 - March 2, 2017**

Register Today!:

Course #1: Safety & Sustainability

Course #2: Testing & Maintenance

Courses #1 & #2: Laboratory Ventilation

I²SL is proud to offer through Exposure Control Technologies, Inc. (ECT) a two-part training series: [Laboratory Ventilation for Professionals and Fume Hood Testing Certification](#).

Attendees of the one-day [Laboratory Ventilation Safety and Sustainability](#) course on February 28 will learn the essentials of laboratory ventilation systems and fume hoods to optimize safety, efficiency, and sustainability. The course will include classroom lectures and demonstrations. The two-day, comprehensive [Fume Hood Testing, Maintenance, and Management Certification](#) course on March 1 and 2 will provide attendees the knowledge to analyze fume hood types and specify appropriate tests for VAV and CAV systems, conduct fume hood performance tests, and apply lessons learned to hands-on lab experience and the fume hood testing certification test. For maximum learning, this course will include a combination of lecture and hands-on lab work. These courses are available to be taken independently or together; however, I²SL and ECT recommend that if you are taking the second course, then you should take the first course as well.

Attendees can receive seven (7) continuing education credits for [Laboratory Ventilation Safety and Sustainability](#) and sixteen (16) continuing education credits for [Fume Hood Testing, Maintenance, and Management Certification](#). For more information, visit [I²SL's website](#). Space in both courses is limited, so register today!
